

XtremeRGB-Ex4+

HD/SD video capture card

DESCRIPTION

The XtremeRGB-Ex4+ has five complete capture channels supporting a single channel for up to 1920 x 1080 DVI or 2048 x 1536 analog resolution, plus four SD composite or S-video capture channels. Also supporting a SD maximum capture resolution of 720 x 576 x 16bit.

The XtremeRGB-Ex4+ captures the analog/DVI data and triple buffers it into onboard storage. This data is then copied using DMA to the host system for display, storage or streaming.

When a EMS graphics card is used, the XtremeRGB-Ex4+ transfers the data directly to the graphics card thereby increasing performance. The XtremeRGB-Ex4+ sends the relevant portions of each captured image to each display channel and instructs each channel to use its graphics engine to render the data. This fully utilises the hardware and dramatically increases performance.

When the RGB/DVI data is displayed on a non EMS graphics card, the XtremeRGB-Ex4+ sends the data to system memory or direct to the graphics card, dependent on the software used for display. The XtremeRGB-Ex4+ is an ideal solution for applications that require the capture of an RGB/DVI source simultaneously with up to four SD video sources.

Typical applications include:

- Viewing analog or DVI sources from a PCs, MACs, Industrial/ medical equipment, cameras and other video equipment
- Streaming video applications
- Video Wall Controllers
